Parentology Dalton Conley 2014-03-18 An award-winning scientist offers his unorthodox  
approach to childrearing: "Parentology is brilliant, jaw-droppingly funny, and full of  
wisdom...bound to change your thinking about parenting and its conventions" (Amy Chua, author  
of Battle Hymn of the Tiger Mother). If you're like many parents, you might ask family and  
friends for advice when faced with important choices about how to raise your kids. You might  
turn to parenting books or simply rely on timeworn religious or cultural traditions. But when  
Dalton Conley, a dual-doctorate scientist and full-blown nerd, needed childrearing advice, he  
turned to scientific research to make the big decisions. In Parentology, Conley hilariously reports  
the results of those experiments, from bribing his kids to do math (since studies show conditional  
cash transfers improved educational and health outcomes for kids) to teaching them impulse  
control by giving them weird names (because evidence shows kids with unique names learn not to  
react when their peers tease them) to getting a vasectomy (because fewer kids in a family mean  
smarter kids). Conley encourages parents to draw on the latest data to rear children, if only  
because that level of engagement with kids will produce solid and happy ones. Ultimately these  
experiments are very loving, and the outcomes are redemptive—even when Conley's sassy kid  
show him the limits of his profession. Parentology teaches you everything you need to know about  
the latest literature on parenting—with lessons that go down easy. You'll be laughing and learning  
at the same time.
