Fundamentals of International Aviation

Routledge International aviation is a massive and complex industry that is crucial to our global economy and way of life. Designed for the next generation of aviation professionals, **Fundamentals of International Aviation, second edition**, flips the traditional approach to aviation education. Instead of focusing on one career in one country, it introduces readers to the air transport sector on a global scale with a broad view of all the interconnected professional groups. This text provides a foundation of 'how aviation works' in preparation for any career in the field (including regulators, maintenance engineers, pilots, flight attendants, airline and airport managers, dispatchers, and air traffic controllers, among many others). Each chapter introduces a different cross-section of the industry, from air law to operations, security to environmental impacts. A variety of learning tools are built into each chapter, including 24 case studies that describe an aviation accident related to each topic. This second edition adds new learning features, geographic representation from Africa, a new chapter on economics, full-color illustrations, and updated and enhanced online resources. This accessible and engaging textbook provides a foundation of industry awareness that will support a range of aviation careers. It also offers current air transport professionals an enriched understanding of the practices and challenges that make up the rich fabric of international aviation.

Parentology

Everything You Wanted to Know about the Science of Raising Children but Were Too Exhausted to Ask

Simon and Schuster An award-winning scientist offers his unorthodox approach to childrearing: “Parentology is brilliant, jaw-droppingly funny, and full of wisdom...bound to change your thinking about parenting and its conventions” (Amy Chua, author of Battle Hymn of the Tiger Mother). If you’re like many parents, you might ask family and friends for advice when faced with important choices about how to raise your kids. You might turn to parenting books or simply rely on timeworn religious or cultural traditions. But when Dalton Conley, a dual-doctorate scientist and full-blown nerd, needed childrearing advice, he turned to scientific research to make the big decisions. In Parentology, Conley hilariously reports the results of those experiments, from bribing his kids to do math (since studies show conditional cash transfers improved educational and health outcomes for kids) to teaching them impulse control by giving them weird names (because evidence shows kids with unique names learn not to react when their peers tease them) to getting a vasectomy (because fewer kids in a family mean smarter kids). Conley encourages parents to draw on the latest data to rear children, if only because that level of engagement with kids will produce solid and happy ones. Ultimately these experiments are very loving, and the outcomes are redemptive—even when Conley’s sassy kids show him the limits of his profession. Parentology teaches you everything you need to know about the latest literature on parenting—with lessons that go down easy. You’ll be laughing and learning at the same time.

Análisis de fallos en sistemas aeronáuticos

Editorial Paraninfo Análisis de fallos en sistemas aeronáuticos es un libro cuya génesis es la investigación del aspecto técnico de la industria aeroespacial, con una perspectiva interdisciplinaria y una visión integral de aporte a la seguridad operacional. Se trata de una obra de utilidad para todos los sectores y especialidades de la actividad aeronáutica. Los contenidos y el análisis son de interés en la seguridad operacional tanto de los operadores comerciales como de la aviación general o las organizaciones militares con medios aéreos. A través de los avances técnicos y la investigación de accidentes y sucesos inseguros, la industria ha logrado incrementar los niveles de seguridad; con ese criterio está estructurada la obra. Desde los primeros contactos del hombre con los fallos de sus rudimentarias herramientas hasta los complejos materiales compuestos que hoy utiliza la industria aeroespacial, esta obra contempla el amplio espectro de materias primas, propiedades intrínsecas, comportamiento típico y propensión a fallos, a través de una visión y un análisis interdisciplinario y sistémico. El texto está estructurado de modo que el lector pueda utilizar este libro como lectura técnica o como manual de consulta sobre temas específicos. La cronología de los temas se ha desarrollado desde un marco histórico evolutivo, partiendo desde las materias primas y las técnicas de fabricación, los conceptos de estructuras aeronáuticas, la mecánica de fractura, el análisis de fallos (con y sin fractura), la mecánica de fatiga, los protocolos de análisis e investigación internacionales, los factores humanos y organizacionales en el área técnica, hasta un compendio de casos típicos que posibilita la fácil comprensión de conceptos abstractos. La obra se estructura en 13 capítulos, desarrollados con un enfoque académico teórico, un marco histórico referencial y procesos de comprobación analítica. De igual modo, en todos los casos y capítulos se han utilizado datos, imágenes y gráficos obtenidos de investigaciones reales de fallos en servicio en la industria aeronáutica. Asimismo, el libro se nutre de gran cantidad de información obtenida durante el proceso de investigación técnica y detección de fallos en accidentes e incidentes de aviación. Como se indicaba anteriormente, la obra en su conjunto presenta una marcada visión sistémica cuyo objetivo es hallar las causas profundas de los fallos y las condiciones latentes presentes en el sistema que propician los accidentes e incidentes. El autor, investigador técnico de accidentes de aviación, lleva más de 15 años dedicado al estudio de la seguridad operacional desde el ámbito técnico, por lo que ha participado en la investigación de accidentes de aviación de transporte, aviación general y aviación deportiva. Actualmente desempeña su labor profesional en la autoridad aeronáutica de la República Argentina como director nacional de investigaciones. También ha sido docente de temas técnicos específicos de investigación y es autor de otros trabajos y obras relacionados con este ámbito.
