Your Guide to Lowering Your Blood Pressure with Dash U. S. Department Human Services 2012-07-09 This book by the National Institutes of Health (Publication 06-4082) and the National Heart, Lung, and Blood Institute provides information and effective ways to work with your diet because what you choose to eat affects your chances of developing high blood pressure, or hypertension (the medical term). Recent studies show that blood pressure can be lowered by following the Dietary Approaches to Stop Hypertension (DASH) eating plan—and by eating less salt, also called sodium. While each step alone lowers blood pressure, the combination of the eating plan and a reduced sodium intake gives the biggest benefit and may help prevent the development of high blood pressure. This book, based on the DASH research findings, tells how to follow the DASH eating plan and reduce the amount of sodium you consume. It offers tips on how to start and stay on the eating plan, as well as a week of menus and some recipes. The menus and recipes are given for two levels of daily sodium consumption—2,300 and 1,500 milligrams per day. Twenty-three hundred milligrams is the highest level considered acceptable by the National High Blood Pressure Education Program. It is also the highest amount recommended for healthy Americans by the 2005 "U.S. Dietary Guidelines for Americans." The 1,500 milligram level can lower blood pressure further and more recently is the amount recommended by the Institute of Medicine as an adequate intake level and one that most people should try to achieve. The lower your salt intake is, the lower your blood pressure. Studies have found that the DASH menus containing 2,300 milligrams of sodium can lower blood pressure and that an even lower level of sodium, 1,500 milligrams, can further reduce blood pressure. All the menus are lower in sodium than what adults in the United States currently eat—about 4,200 milligrams per day in men and 3,300 milligrams per day in women. Those with high blood pressure and prehypertension may benefit especially from following the DASH eating plan and reducing their sodium intake.

Stop The Slip Thom Disch 2017-03-07 Slips, trips and falls are a chronic health problem in the US and around the world. Fall injuries are the number one cause of emergency room visits and the fourteenth leading cause of death in the US. The average person is 7 times more likely to die from a fall than from the flu and 3 times more likely to die from a fall than by a firearm. Since 1999, we have reduced deaths from heart disease 15%. Deaths caused by auto accidents are down 12%. But during that same time period deaths from falls have increased over 150%. Both injuries and deaths caused by falls are at record highs and the problem continues to grow. We've learned how to fix the human heart and we have made driving safer. Now is the time to focus on preventing fall injuries. The good news is that fall injuries are preventable. Everyone falls, but falls don't just happen, they're preceded by other events. When you eliminate those events, you reduce the risk of falling. Stop the Slip shows how you can avoid these injuries. Following the simple five step A-L-E-R-T System(TM) discussed in the book you will reduce your risk of falling. Thom Disch provides an entertaining and engaging look at: Why we fall; where we fall; the business side of falls; and most importantly how we can prevent and avoid fall injuries. The book is a comprehensive mix of research on the topic of falls and fall injuries mixed with real world stories and experiences about falls and their consequences. As you read this book you'll also discover many interesting and surprising facts. For example: -Fall injuries are not just a problem for the elderly. 75% of all fall injuries happen to people under the age of 68. -The annual economic impact of fall injuries in the US exceeds \$150 billion, or more than 1% of our gross domestic product. -Falls are the number one cause of traumatic brain injuries. -Winter weather appears to be a much smaller cause of fall deaths than you might expect. -Falls cause nearly 4 times more emergency room visits than auto accidents. This is a topic that affects everyone. Reading this book is the first step to making your family and friends safer.

The Food Cure: Eat Your Way to Good Health Christine & Sonny Gray 2018-02-04 Poor health is America's #1 problem. Over 70% of us are either overweight or obese. Over 70% of Americans are on at least one prescription medication, and more than half take two. Preventable chronic diseases are responsible for the overwhelming majority of deaths in this country. Just two of these chronic illnesses—heart disease and cancer—together account for nearly half of all deaths in the U.S., needlessly taking the lives of 1.2 million loved ones each year. Currently, 94% of the calories being consumed by Americans come from meat, dairy products and processed foods with only 6% of calories coming from healthy fresh vegetables, fruits, beans/legumes, and whole grains, according to the USDA's Profiling Food Consumption in America. The Standard American Diet full of fat and sugar (meats and sweets) is depriving us of real nutrients that our bodies require for good health. In this eye-opening book, the authors reveal the causes of our chronic diseases and the foods that can make us well.

Heart Solution for Women Mark Menolascino, M.D. 2019-01-29 Heart disease remains the number one killer of women, outpacing breast cancer, diabetes, and stroke, with one in four women receiving a diagnosis in her lifetime. And the problem is only getting worse. Dr. Mark Menolascino has been on the front lines of cardiac research for most of his life, running a highly successful clinic where he takes a holistic, personalized approach to reversing disease and jump-starting health. Most of his patients are women struggling with symptoms and illnesses that stem from the most important, life-giving organ in the body: the heart. In Heart Solution for Women, Dr. Menolascino explores the many ways our hearts are the pathway to overall health. While the classic risk factors for heart disease—obesity, high cholesterol, high blood pressure, stress, and poor diet—are critical components, symptoms of the disease manifest differently in women's bodies and can go misdiagnosed for years. They include depression, anxiety and panic attacks, poor sleep, and widespread pain, and can be masked during pregnancy, post-pregnancy, and menopause only to appear with great force later in life. Featuring the latest research on gut, brain, and hormone health and including answers to the most common heart-health misunderstandings, Heart Solution for Women finally gives women the tools to succeed, feel great in their bodies, and add years to their lives.
